<sup>1</sup>The situation caused by COVID-19 disease positively impacted the sales revenues trends in 2020 when a prominent effect of stockpiling of food and pharmaceutical products by customers was recorded in almost all markets in which the Podravka Group is present. Increased demand in 2020 significantly contributed to sales revenues of both business segments and almost all business units and categories, but this impact could not be clearly distinguished from the impact of regular demand for products. In 2021, the epidemiological situation also had a significant impact in most countries in which the Podravka Group operates, especially in the Adria region (mostly in Croatia), which is different from the one recorded in 2020. Negative impact on sales revenues in the first three months of 2021 comes from the introduced strict epidemiological measures such as lockdown and curfew, reduced store opening hours, restrictions on the number of customers in stores, limited movement of people, closure of the Gastro channel (includes HoReCa customers, institutional customers, industrial customers, etc.), difficult access to health care facilities, reduced number of diagnostic procedures and consequently, lower levels of prescription drugs prescribed. The positive impact on sales revenues in the reporting period comes from the easing of measures which began in May and a significant easing in the third quarter, which gave a boost to the tourist season and the arrival of foreign guests in Croatia. Positive trends continued until the end of 2021 since there was no new lockdown, as was the case in the comparative period. The successful tourist season, easing of epidemiological measures in the countries where the Podravka Group is present with its range, opening of the Gastro channel in Croatia and abroad and the absence of strict epidemiological measures in the fourth quarter positively reflected on the movements of sales revenues, but this effect cannot be clearly estimated or quantified.
